

Solution LUXE Violet Ultra-Rapid

Luxe Ultra-Rapid is a one-of-a-kind rapid rinse, violet-based solution perfect for any skin type, year-round. Similar to our Original Ultra-one, this solution is alcohol-based to provide the quick-dry feel clients love. This solution is formulated with 18% DHA, and tan level will rely on how long it is worn before showering to deactivate the DHA progression.

What is a violet based solution? Solution undertones are affected by the cosmetic bronzer within the formula. These cosmetic bronzers act as a color guide for technicians during application as well as a

temporary color for the customer as the tan develops. The cosmetic bronzer will wash off in the shower however, and it does have a staining power that tints the skin with the undertone used, violet, or green are most common. The tint is only temporary and will gradually fade.

How to use

Clean and prep the body using our pH Balancing prep spray and Barrier Cream. For a full-body tan, use 2oz. of the solution and only apply 1-coat. The client should wait 8-hours before rinsing and no longer than 23-hours. Do not use soaps or washes during the initial rinse. Soaps that can compromise the tan should be avoided for the duration of the tan.

*Technician tip: Because this is a Rapid Rinse formula, it's essential to understand the DHA will continue working over 24 hours once the initial rinse has occurred. Clients may experience no color up until this 24-hour mark. It is best to wait at least 24-hours to determine the client's official developed color.

Recommended skin type for this solution

Luxe Ultra Rapid Tan is designed to suit all skin types. Color development will be dependent on how long the client has worn the solution. To avoid overdevelopment, it is best to send a reminder text or call to your client to be sure they shower at the correct time. Luxe Ultra has 18% DHA, so if left on too long, your client could experience an extreme contrast between natural skin tone and spray tan, resulting in an uneven fade or an unnatural color. Processing time for LUXE Violet Ultra-one:

[2 Hours – 6%, 3 Hours- 9%, 4 Hours – 12%]

Ingredient benefits

Glycerin- A moisturizing ingredient that prevents dehydration of skin and aids in retaining moisture.

Cetearyl Alcohol – This alcohol is non-toxic and safe for the skin, also not drying or irritating like other types. This ingredient is 95% pure and natural. It is considered fatty alcohol derived from coconut oil. This is not a derivative of Petro. It is used as an emulsifier, which bound water and oil together and used as a texture enhancer.

Glyceryl Stearate- Used as a skin-conditioning agent, emollient, and a surfactant.
